

# Mykare Voice AI Engineer Task

Build a real-world AI voice agent that can talk, understand, and take actions.

---

## Timeline

24-48 hours

Expected effort: 3-6 hours

---

## What You Need to Build

A **web-based AI voice agent** that can:

-  Listen to user speech (speech recognition)
-  Understand intent
-  Respond with natural voice (synthesized voice)
-  Show a talking avatar (syncd with speech)
-  Book & manage appointments
-  Summarize the conversation

Think of it like a **front-desk AI for healthcare**

---

## Suggested Tech Stack

| Layer   | Options                                   |
|---------|-------------------------------------------|
| Voice   | LiveKit Agents                            |
| STT     | Deepgram                                  |
| TTS     | Cartesia                                  |
| Avatar  | Tavus / Beyond Presence                   |
| LLM     | OpenAI / Claude / OpenRouter or any other |
| Backend | Python                                    |

|          |                                       |
|----------|---------------------------------------|
| Frontend | Vite / Next.js                        |
| DB       | SQLite/ Supabase / Any Other Database |

---

## ✅ Core Requirements

### 1. 🎤 Voice Conversation

- Hear and understand user speech
- Handle 5+ back-and-forth exchanges
- Maintain context
- Response latency: < **3–5 sec**
- The call interface

---

### 2. 👤 Avatar

- Display a speaking avatar
- Sync lips with voice
- Smooth experience (no lag/freezing)

---

### 3. ⚙️ Tool Calling (VERY IMPORTANT)

Your agent must intelligently call these actions:

#### ♦ **identify\_user**

- Ask phone number
- Use it as unique ID

#### ♦ **fetch\_slots**

- Return available slots (can hardcode)

#### ♦ **book\_appointment**

- Save in DB
- Prevent double booking
- Confirm clearly (date, time)

#### ♦ **retrieve\_appointments**

- Show user's past bookings
  - ♦ **cancel\_appointment**
  - ♦ **modify\_appointment**
  - ♦ **end\_conversation**
- 

### **Must Extract from conversation:**

- Name
  - Phone number
  - Date
  - Time
  - Intent
- 

### **UI Requirement**

Whenever a tool is called:

- Show it visually on screen
  - Example:
    - “Fetching slots...”
    - “Booking confirmed ”
- 

## 4. **Call Summary (Critical)**

At the end:

- Summary of conversation
- List of appointments
- User preferences (if any)
- Timestamp
- Show on UI

 Generate within **10 seconds**

---

## **Deliverables**

1. Backend GitHub repo
2. Frontend GitHub repo
3. Live deployed link

#### 4. Demo Screen Recording or Screenshots

---

## Evaluation Criteria

### **Must Have**

- End-to-end working system
- Voice + tool calling + DB working
- Smooth conversation flow

### **Good to Have**

- Clean UI

### **Bonus**

- Cost per call breakdown
- Smart edge-case handling
